OVER 800 PRODUCTS READY FOR YOUR BUSINESS

For over three decades, Stinger® Chemical has proven to be one of the country's dynamic automotive chemical companies. The company specializes in manufacturing and supplying a complete line of automotive and aftermarket chemicals for the car care professional, including reconditioning products, car wash chemistry, automotive chemistry and equipment.

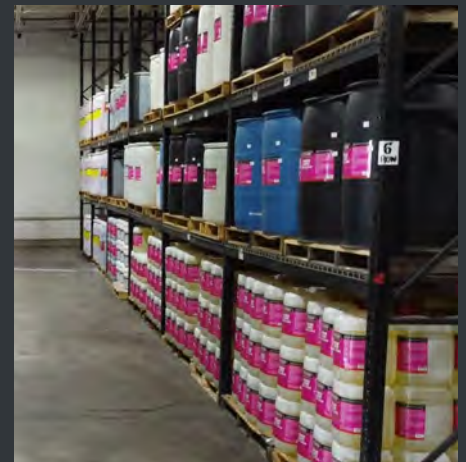

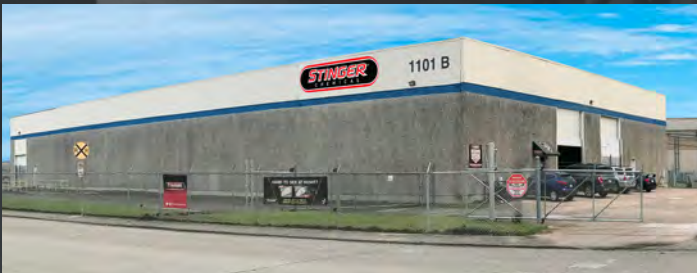

Our highly trained staff is committed to being innovators in the industry, continually improving our products and services to ensure customer satisfaction. Working closely with our distributor network on the development process ensures that our products meet user expectations in performance, value, and quality.

Located in Houston, Texas, the Energy Capital of the world, Stinger Chemical's 11-acre campus and state-of-the-art production facility enable us to be a leader across the automotive chemical industry today and into the future. Our location and history in Houston allow us to have direct access to the world's largest producers of raw materials from leading petrochemical refineries. The connections to these raw material suppliers and access to the second-largest port in the US allow us to procure the finest materials to produce the highest quality automotive care products. Access to these raw materials translates to superior products and a reliable supply chain for our customers.

Our professional line of products are used in *car washes, auto dealerships, reconditioning shops, OEM, and auto auctions* across the United States and internationally. Our international business and objectives for expansion are at the forefront of our minds. We export our products to North America, South America, Europe, Asia, Australia, and the Middle East.

OUR LAB

Our Research and Design Lab is not just responsible for creating new products; they also manage our quality control operation, ensuring that our full line of products perform as designed with each shipment. Every time you receive our products, you can be confident that each detail has been tested to meet our highest performance standards. Our results extend far beyond the lab. Each of our car wash, reconditioning, and automotive chemistry products receive extensive testing in the field by our certified distributors.

Time required to completely cover and sand within a given area is equivalent to the speed of above grit number in traditional abrasive paper. (Because "depth of sanding scratches" differ from product to product, the above guide is not necessarily equivalent to speed of material removal in volume).																
Finish Equivalence	Manual	>P240	>P360	>P600	>P800	>P1000	>P1200	>P1500	>P2000	>P2500	>P3000	>P800	>P1200	>P1500	>P2000	>P2500

The effort required to polish the finish of referenced products is equivalent to a finish left behind by the above grit numbers.																

(Note: Cutting speed and Final finish vary depending on the method of sanding and the condition of the sanding surface.)
